

Document #4

Clinical miscellaneous VHN information you need to know:

1. Labs ordered in the STD module should pull into the regular lab pages from that module, so please check that they did so.
2. When you go to post results **you must be sure to post the results in the regular** lab pages, or these labs are not reconciled, and will come out on as report as such. The **results** DO NOT pull into the lab pages from the STD module. (Keep in mind that this module is being updated by M&M this summer)
3. When ordering lab test, you can order only tests that there are service codes for. If you click on the lab dropdown box and do not see a service code for that test, or see that test, it is NOT in the system to order and will not generate anything. Notify your computer liaison that you need a service code, it is possible it is there under a different name or description.
